Assembly will require to use 26x M2 self tapping socket head screws
OTTON Design Statement
Otto teaches a generation to code and build. OTTON is what happens when that generation grows up — same family, different chapter.

OTTON is a structural reinterpretation of Otto — not a reskin, but a ground-up rethink of how every part connects to every other part. The same way all machines around us are built. The silhouette is the same. The proportions are the same. The electronics are the same. What changes is the design language: from toy to machine.

Where Otto uses a closed shell clipped together around its components, OTTON separates structure from surface — an inner frame holds the electronics, an outer frame defines the body, and removable panels close it all in. Access to internals without disassembly. Panel replacement without touching the structure underneath. Full dimensional and electronic compatibility with the Otto platform is retained throughout.

OTTO was always meant to outgrow itself. Otto started it. OTTON carries it forward.
